Systems: A1phadeck AA2 – Anthracite Grey – 295mm Wide triple planks – 15.75mm depth. M12 bolt install system.

Project Size: 230m² over 46 new build bolt-on balconies

Project background: A new build project in the heart of Tower Hamlets consisting of 46 new build plots.

The solution: Approved Building Products worked closely with the installation contractor to provide installation training and support a rolling programme. Due to the lack of storage space on the small and busy site, regular deliveries of materials were required to ensure their programme was kept to. With the quick and easy installation of the system using a combination of the built in M12 bolt channels on the underside of the A1phadeck system and the standard clip detail, the number of deliveries was limited as the system could be installed across multiple balconies within days.

Clip detail used on light section intermediates.

The benefits: The quick installation provided by both the M12 channels and clip details led to the install programme being completed on each plot within days of being available ensuring follow on trades could also keep to their programme.
